

INDUSTRIAL PROJECT MANAGEMENT & CONSULTING SERVICES

When it comes to Industrial Project Management and Consulting Services, ELOS has the knowledge and experience necessary to provide unparalleled service across various industries. Whether we are working with crude oil refinement plants or chemical processing stations, our industrial project management and permitting experience has allowed us to facilitate successful partnerships across the Gulf South.

When a client partners with our Industrial Services team, ELOS is able to provide invaluable support that can fulfill a myriad of industrial management requirements while maintaining compliance with any regulatory oversight agencies. Every industrial corporation requires maintenance and improvements to the systems and structures required to operate the business. Whether assisting with plant upgrades and refinements or assisting with updating liquid terminals, ELOS has the industrial project management experience necessary to assist with every business need.

We have experience working in industrial improvements, feed stock improvements, liquid tank terminal improvements, pipe racks, and more. In order to allow critical decision makers to continue providing their important duties to the business, our goal is to position ourselves as a partner that can manage each aspect of industrial maintenance, including:

- Engineering surveys
- Geotechnical engineering
- Civil engineering
- GIS services
- CAD/AutoCAD services and other related engineering work and services
- Industrial hygiene
- Surveying area
- Depth soundings
- Inspections
- Soil sampling or boring

How we can help

Why Industrial Project Management & Consulting Services?

Maintenance and support is essential to ensure continuous workflow throughout any industrial production station or plant, but industrial maintenance projects are often met with ongoing regulatory oversight.

ELOS understands one of the most crucial components of industrial consulting and management is competent and comprehensive inspection. Our technical proficiency is a key component of our success driven approach to industrial permitting assistance. Our combined years of experience has led to successful and valuable relationships with various regulatory oversight agencies including:

- Local Levee Districts and Boards
- United States Army Corp of Engineers (USACE)
- Coastal Protection and Restoration Authority (CPRA)
- Louisiana Department of Natural Resources (LDNR)
- Louisiana Department of Environmental Quality (LDEQ)
- Flood Protection Authorities
- Other local stakeholder authorities

Permitting assistance and maintaining positive relationships with regulatory agencies is essential to providing effective industrial project management services. Without proper permitting, projects can be delayed for indefinite periods and met with potential fines. When it comes to industrial needs, ELOS provides the complete solution, ensuring protection and compliance from regulatory oversight while maintaining effective and quality project management services.
